Dear Sir / Madam,

I'm following up on your request for information about the Fowler Seeding System.

When Brian and I discovered, some fourteen ago, that in the "Deep Blade System / Minimum till" system, there was a better germination and emergence when we didn't compress the soil over our seed... we started to develop what is now the Fowler Seeding System (F.S.S.).

The design has changed over the years but, not the principal. I would like to thank the farmers involved for their valued input into design and development... willing contributors in the evolution of our system. Some are listed below.

We do deliberately encourage you to have a close look at what we have to offer, because we believe it to be the best system for broad acre planting.

The main benefits of using F.S.S will be; Germination and emergence.

Meaning under the seed cultivation. Hill / valley moisture retention. Keeping the seed planted with in the top 50mm of the soil profile. Accurate seed placement. Covering the seed with a fresh loose soil, creating an insulation layer, staying moist, delaying evaporation. Making it easy for the seed to geminate and emerge. Fully adjustable, set and forget.

You may wish to talk with some people that are using the F.S.S.

Ken Booth 96732013

Chris Wilding 96711183 - 0427711183

Larry Mincherton 96751032 - 0427751032

Craig Strahan 96843042

Mark Coaker 99716087

Lincoln Booth 96731044 - 0427724079

John Ross 96841207 - 0427841207

Anthony Applegate 96731010

Brian Fowler 96732032 - 0428732032

Glen Solomon 99731152 - 0428731162

There are several others using the older system if you wish to speak with them.

Please consider and do not hesitate to call me with any enquiries.

Yours sincerely,
Colin Fowler.
